

Art.1008 LATEX

Additional additive for mortar, plaster

GENERAL SPECIFICATIONS:

LATEX is an additive based on an acrylic binder which is used as an addition to the preparation of the mortar and increases the water resistance of the mortar as well as its ability to bond with the wall

ADVICE:

- Protect the product from frost
 - Used at temperatures from 10°C-30°C
 - Respect the drying time
 - The resistance to water is tested after 7 days
 - Applying a thin layer can lead to sticking of the adhesive
 - After use, work tools should be cleaned with water
 - Store the product in dry places and away from contact with the sun and heat sources
-

APPLICATION DETAILS:

LATEX is used in any mix with mortar and concrete and it is advisable to use 1 lt of LATEX every 4 kg of cement if we want to increase the performance of concrete or in case of use in paint and plaster, 1 lt of Latex in every 8 lt of water.

CHARACTERISTICS:

Bonding:	With Water-based resins
Visual aspect:	white liquid
Packaging:	1lt, 4lt, 20lt

All the above technical data are the fruit of our experience, they have a guiding character for the final result. The data in the technical tab can be changed based on possible changes in raw materials and production technology. Before using the product, we always advise that a preliminary test is done with the product*
